CYNBIT TECHNOLOGIES

AI & CRM AUTOMATION

CAMPAIGN PROPOSAL

Turn Enquiries Into Conversations

A focused B2B campaign for AI agents and CRM automation.

Reduce manual lead-entry tasks

Support consistent follow-up

Explore integration with your existing tools

BETTER LEADS.
STRONGER CONVERSATIONS.

Prepared by **Sanjana Uprety**
Growth Marketing Intern assessment

30-day pilot
India

₹10,000
proposed media budget

One audience. One problem. One clear offer.

Audience

Proposed segment: founders and sales / operations managers at small Indian B2B service businesses.

They handle enquiries across messages and spreadsheets.

Problem

Manual lead entry and inconsistent follow-up can make enquiries difficult to manage.

Validate this pain point in early discovery calls.

Offer

A discovery conversation about their current lead workflow and possible automation.

No free audit, guaranteed outcome, or delivery promise.

Qualified lead = a relevant business, a stated workflow problem, and a contact willing to discuss a solution.

Why this campaign should work

Hypothesis: specific lead-follow-up messaging will produce a higher enquiry conversion rate than broad automation messaging, without reducing lead quality.

Service fit

Cynbit lists lead-management AI agents, CRM automation and software integration.

Message fit

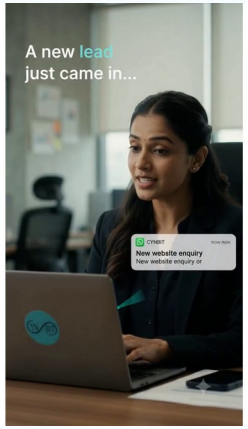

A recognizable business problem makes the service easier to understand and evaluate.

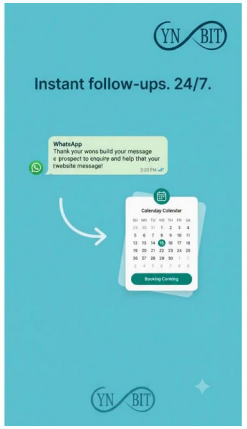

Conversion fit

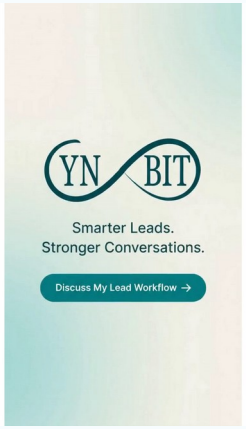

One enquiry form and one CTA guide visitors toward a discovery conversation.

This is a testable proposal—not a claim about Cynbit's existing customers or campaign performance.

Video 01 / Alternative campaign creative

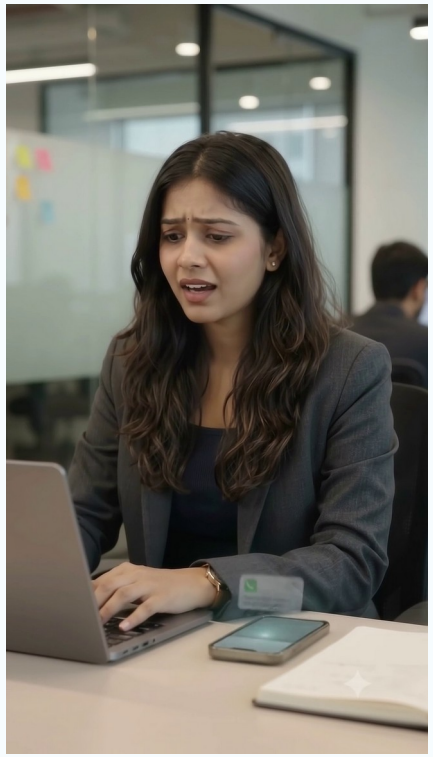

Horizontal export • 1920 × 1080 • approximately 10 seconds

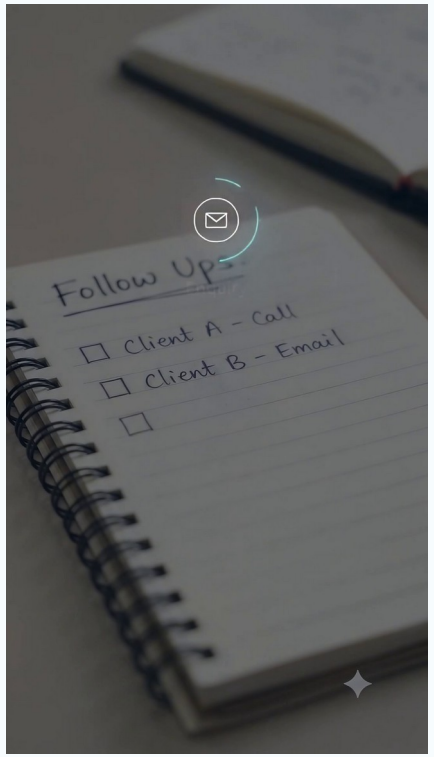

Alternative version supplied by the applicant. Original framing and content are preserved.

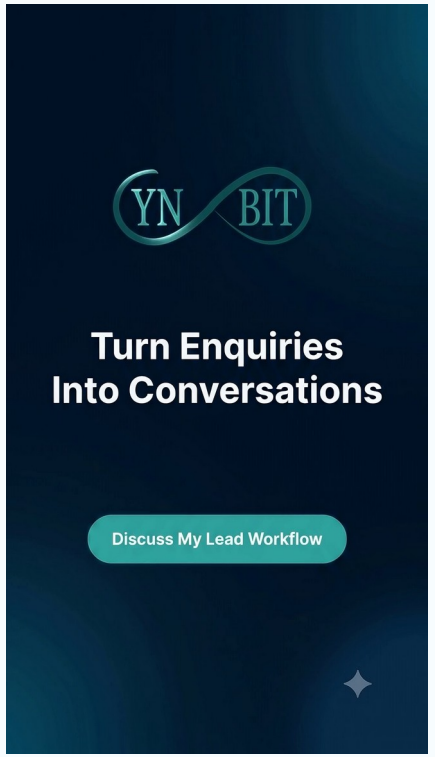

Original MP4 attached to this PDF: Video-01-Cynbit-Campaign.mp4

Open the PDF's Attachments panel in a compatible reader, save the file, then play it.

Video 02 / Main campaign creative

Turn Enquiries Into Conversations

Portrait export • approximately 10 seconds

1080 × 1920

Selected main video creative.

Illustrative AI-generated scenes—not a verified product demonstration. Original video preserved.

Video 03 / Alternative campaign creative

Turn Enquiries Into Conversations

Portrait export • approximately 10 seconds

720 × 1280

Alternative video creative.

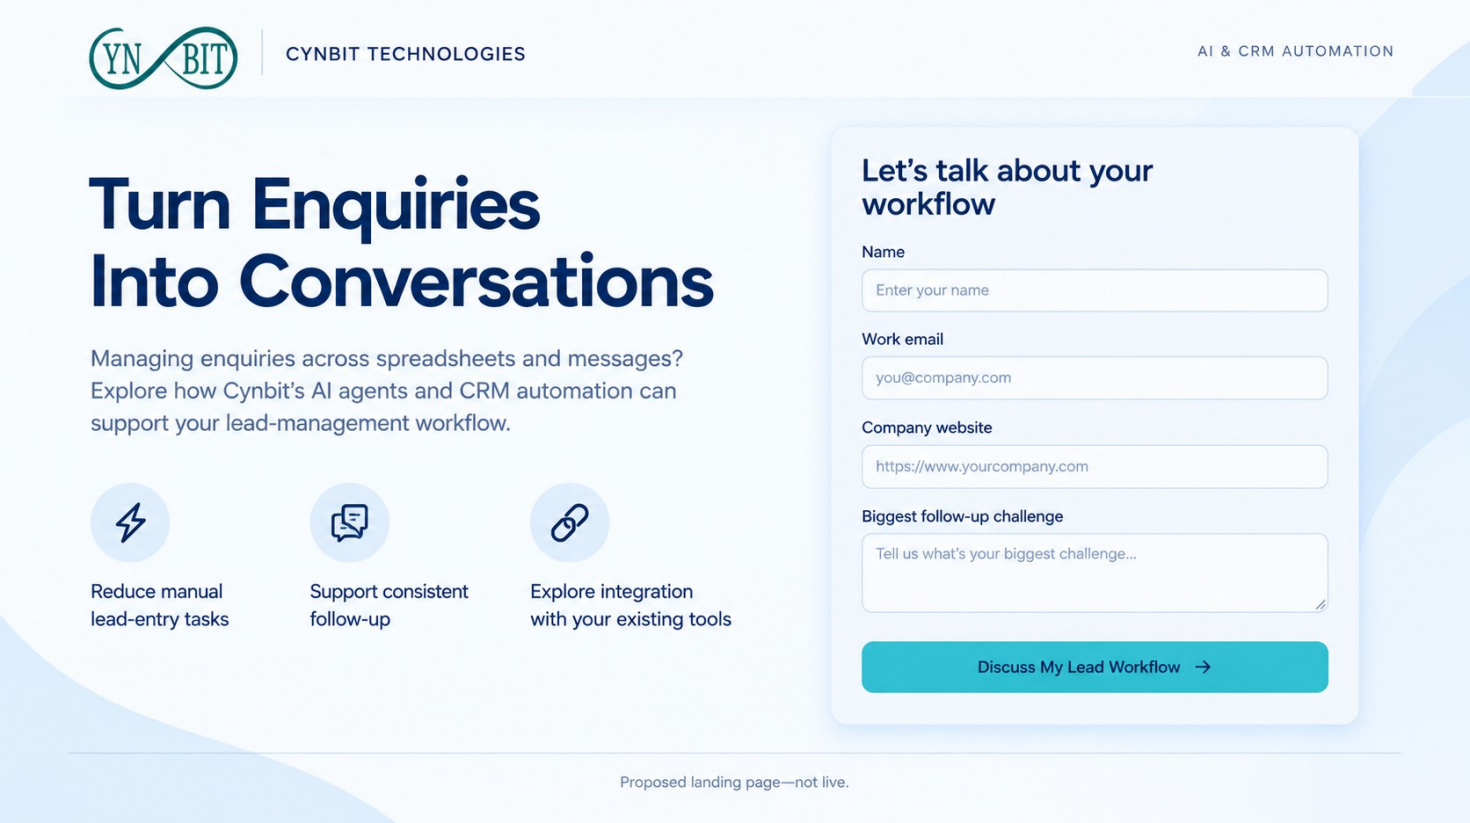

Illustrative AI-generated scenes—not a verified product demonstration. Original video preserved.

Original MP4 attached to this PDF: Video-03-Cynbit-Campaign.mp4

Open the PDF's Attachments panel in a compatible reader, save the file, then play it.

Creative 02 / A focused landing-page concept

Message match → three service benefits → short enquiry form → one clear CTA. Visual mockup only; not a live form.

Acquisition plan / Capture intent, then learn

Paid: Google Search

Allocate the proposed ₹10,000 media budget here.

Start with phrase / exact terms around CRM automation services and lead-follow-up automation.

Review search terms; exclude jobs, courses and unrelated free-tool queries.

Organic: LinkedIn

Publish the video with a problem-led caption and a tagged landing-page link.

Propose 2 posts per week: video, workflow explanation and practical follow-up tips.

No paid LinkedIn budget; measure this traffic separately.

Before launch: validate keyword demand and CPC, secure Cynbit approval, build the real page and form, confirm branding, and test tracking. Creative production and sales time are outside the media budget.

Pilot economics / Targets, not achieved results

₹10,000	4%	₹50	5%
Media budget	Search CTR target	Assumed CPC	Enquiry CVR target

5,000 impressions → 200 clicks → 10 enquiries → 4 qualified leads → 2 booked calls

Illustrative assumptions: 40% of enquiries qualify; 50% of qualified leads book.

The click-to-enquiry calculation assumes each paid click produces a measured landing-page session.

Implied CPL: ₹1,000 • Cost / qualified lead: ₹2,500 • Cost / qualified booked call: ₹5,000

CAC: ₹10,000 media-only if one customer converts—not a forecast. With zero customers, CAC is not yet measurable. Full CAC adds relevant production and sales costs. Validate acceptable CAC against customer margin.

Experiment / Change the headline, not everything

A / Problem-led

“Still managing lead follow-ups manually?”

B / Solution-led

“AI-powered lead management for growing businesses.”

SETUP

Random 50/50 visitor allocation; persist the variant. Keep traffic source, offer, form and page design unchanged. Exclude internal and bot traffic.

MEASURE

Primary: successful enquiries / eligible sessions.
Guardrail: qualified leads / enquiries.
Deduplicate submissions and compare like-for-like source traffic.

At 200 visits, this is exploratory. A 5% → 10% lift needs roughly 435 visitors per arm (80% power, 5% two-sided α).

Tracking / Connect marketing to sales outcomes

Ad → visit	Google Ads + GA4	Impressions, clicks, CPC; UTMs and source / medium
Visit → enquiry	GTM + GA4	generate_lead only after confirmed success; capture variant
Enquiry → qualified	CRM / restricted sheet	Lead ID, fit, challenge, qualification date and status
Qualified → booked / attended	CRM / restricted sheet	Booking and attendance tracked separately
Attended → customer	CRM / sales records	Won date, revenue, cost and campaign cohort

Attribution: retain first-touch and latest non-direct UTMs in the CRM; report Search and LinkedIn separately.

Never send names or emails to GA4. Restrict CRM access, follow consent requirements, and test duplicate prevention.

30-day roadmap / Learn before scaling

Days 1–5 / Prepare

Approve offer and brand assets.

Build page; QA events and CRM.

Check demand and CPC.

Days 6–20 / Launch

Launch Search and LinkedIn.

Review queries and lead quality.

Log changes; avoid early winners.

Days 21–30 / Evaluate

Review qualified bookings.

Report test uncertainty.

Follow sales outcomes to day 90.

Decision rules: pause on tracking failure or irrelevant traffic. Investigate any query / ad group spending ₹2,000 with no enquiries. Consider a 20% budget increase only after at least 3 qualified bookings at ≤₹5,000 each, sales-fit confirmation and approval.

The pilot targets only 2 bookings, so it may justify another controlled test—not scaling. No A/B winner without adequate sample size. Track late customer conversions against the original acquisition cohort.

Sources & scope / Transparent by design

Official service descriptions—not independently verified performance claims

Cynbit services: AI agents, CRM automation and integration
